

Course Name : Web Technologies

Course Code : CSEG7007

Course Instructor :

J.Dhiviya Rose

Assistant Professor-Selection Grade

School of Computer Science

Email : dhiviyarj@ddn.upes.ac.in

Mobile : 9410188296

File | C:/Users/dhiviyarj/Desktop/Web%20Technologies/Activity/heading.html

Ordered List

This is reflected using internal stylesheet

1. One
2. Two

Unordered List

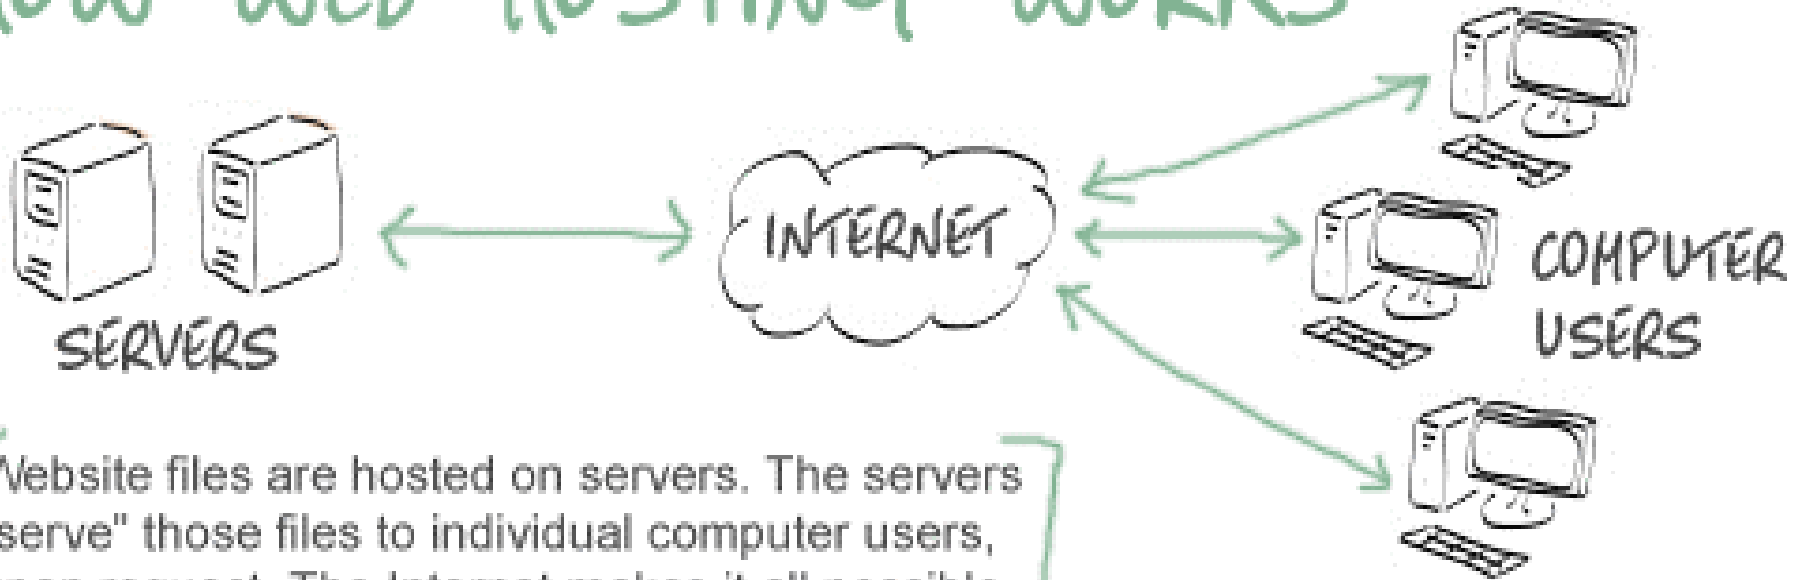

- Three
- Four

My Laptop is connected to the internet

HOW WEB HOSTING WORKS

Website files are hosted on servers. The servers "serve" those files to individual computer users, upon request. The Internet makes it all possible.

Static Web Pages & Dynamic Web Pages

Program

Scripts

PROGRAMMING LANGUAGES

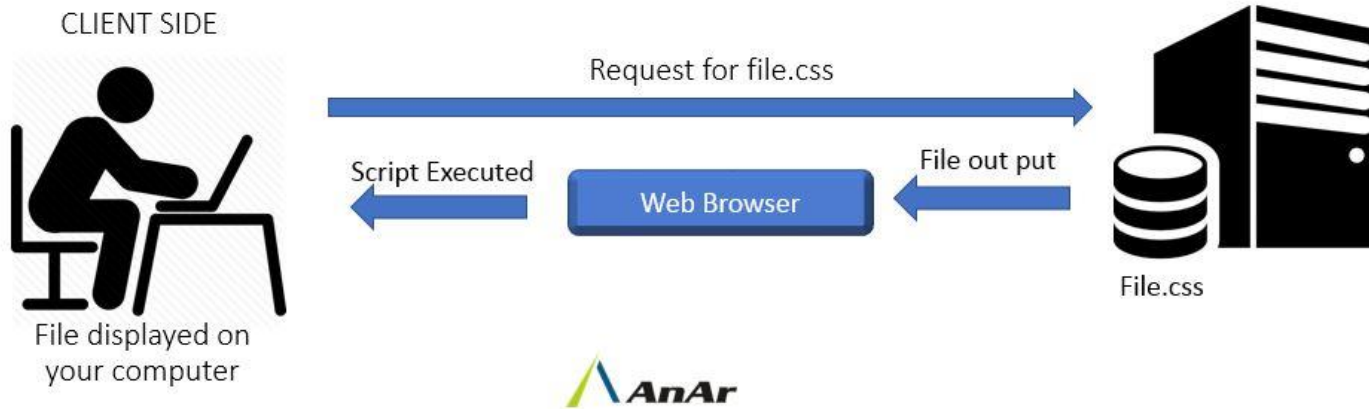

SCRIPTING LANGUAGES

PARAMETERS	SCRIPTING LANGUAGES	PROGRAMMING LANGUAGES
Language Type	Interpreter-based languages	Compiler-based languages
Use	Aid the integration of the existing components of the application	Aid from-scratch development of applications
Compilation	Compilation is not needed	Compilation is needed
Complexity	Easy to write and use	More complex in terms of writing and usage
Conversion	Convert high-level instructions into machine language	Help in the conversion of the whole program into machine language at once
Running of Language	Program-dependent	Program-independent
Maintenance	Low maintenance	High maintenance
Cost	Relatively easy and cheap to maintain	More expensive to maintain

Client VS Server Side Scripting

The process of client side scripting

JavaScript Versions

[< Previous](#)
[Next >](#)

JavaScript was invented by Brendan Eich in 1995, and became an ECMA standard in 1997.

ECMAScript is the official name of the language.

ECMAScript versions have been abbreviated to ES1, ES2, ES3, ES5, and ES6.

Since 2016, versions are named by year (ECMAScript 2016, 2017, 2018, 2019, 2020).

How to add JavaScript to a webpage

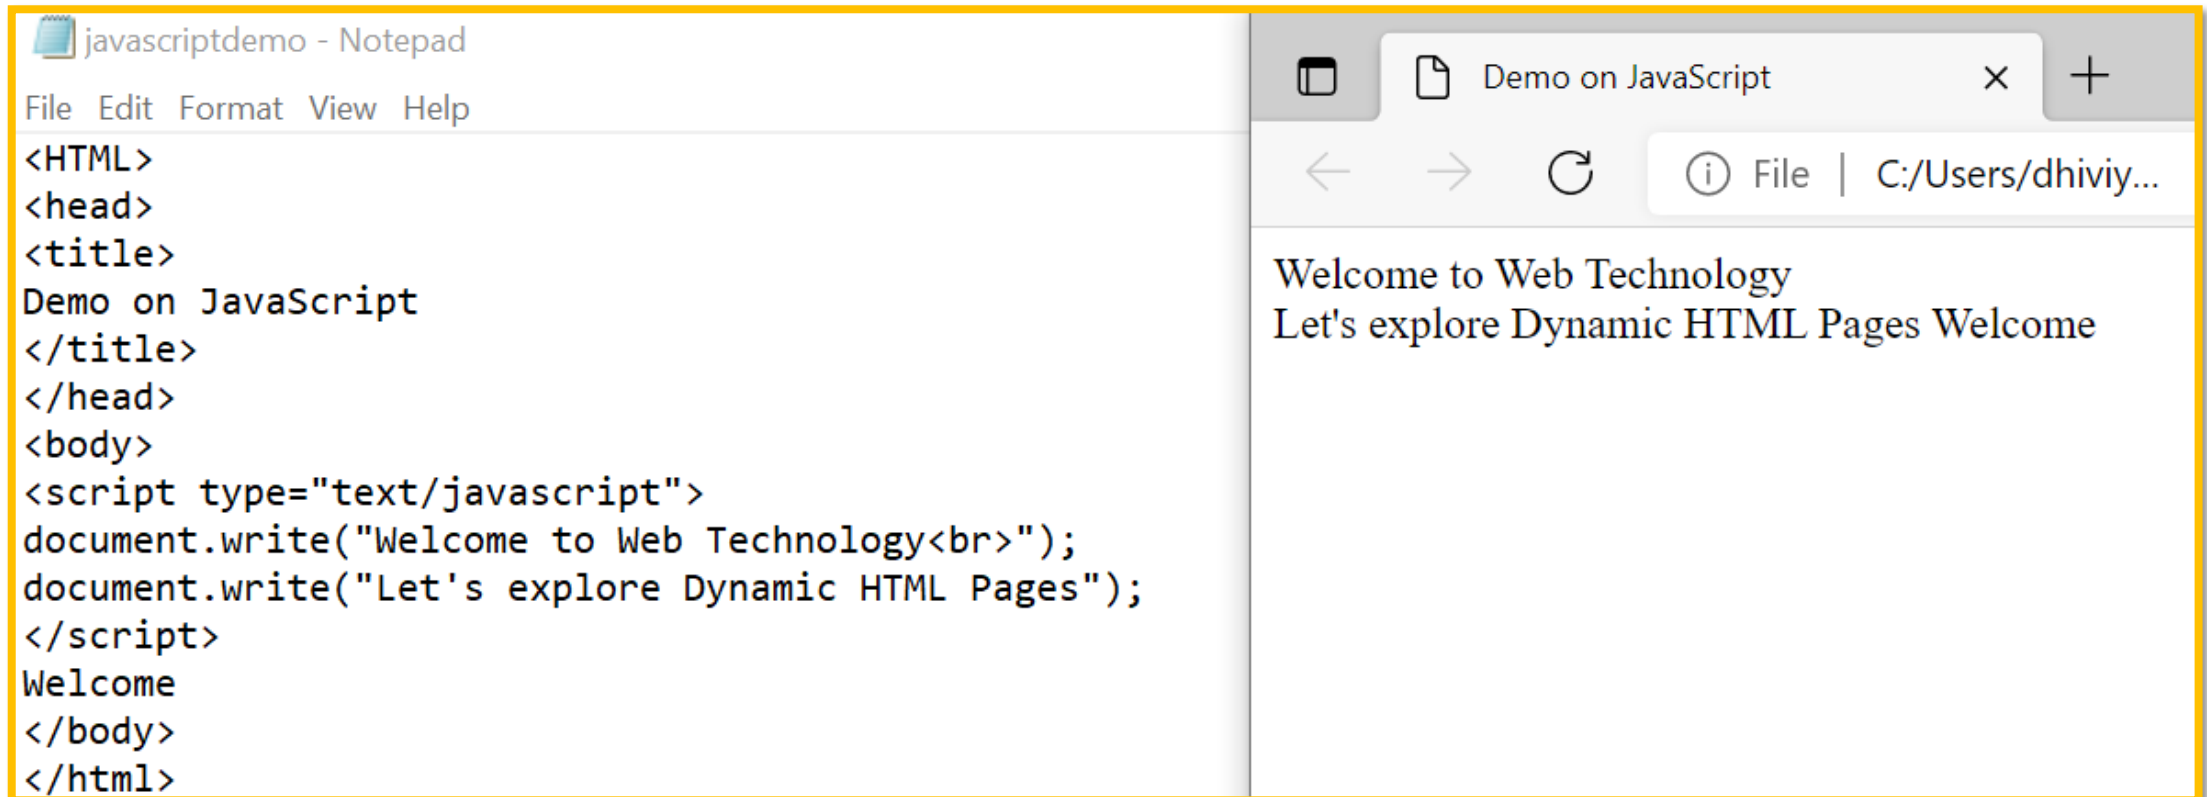

- Internal JavaScript in <script> tag
- External JavaScript as *.js file

```
<html>
<head>
<script type="text/javascript" src="message.js"> </script>
</head>
<body>
```

```
<script>
var a=10;
var b=20;
var c=a+b;//It adds values of a and b variable
document.write(c);//prints sum of 10 and 20
</script>
```

Document.write()

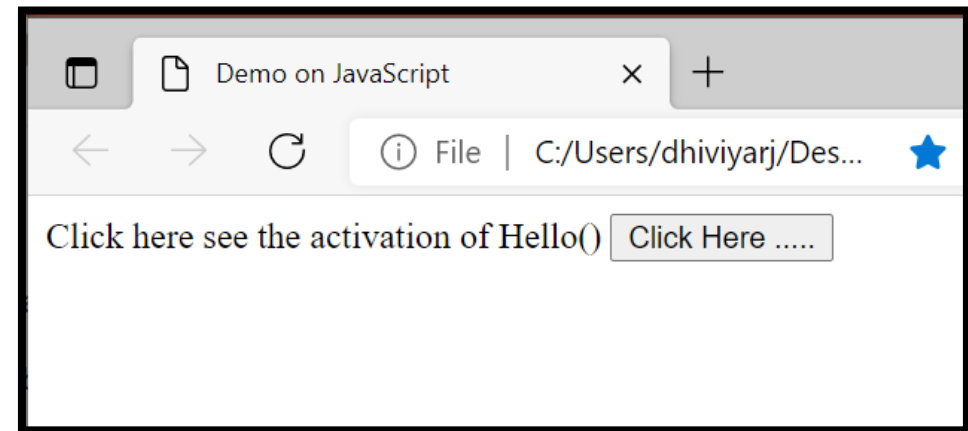

document.write() method of JavaScript is used to write to a web page.

```
<HTML>
<head>
<title>
Demo on JavaScript
</title>
<script type="text/javascript">
function Hello()
{
document.write("Welcome to Web Technology<br>");
document.write("Let's explore Dynamic HTML Pages");
}
</script>
</head>
<body>
<div>
<form>
Click here see the activation of Hello()
<input type=button onclick=Hello() value="Click Here
.....">
</form>
</div>
</body>
</html>
```

Writing function in JavaScript

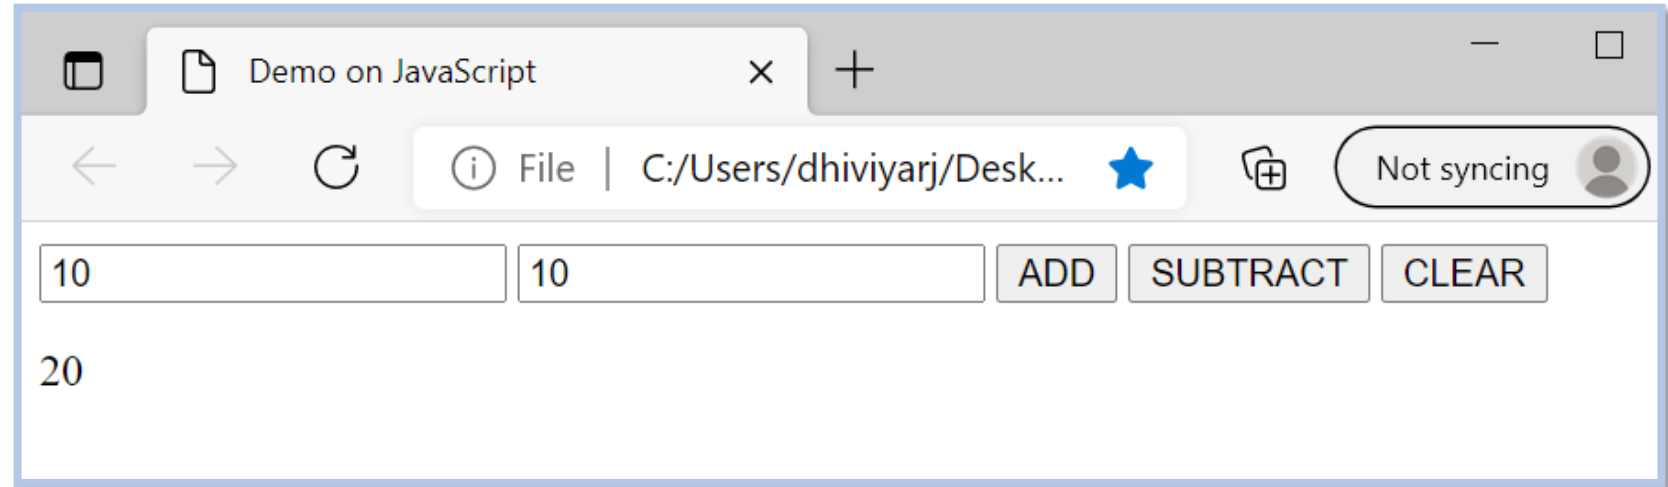

getElementById() function

```
<script type="text/javascript">
function add()
{
v1=document.getElementById("t1").value;
v2=document.getElementById("t2").value;
n1=parseInt(v1);
n2=parseInt(v2);
ans=n1+n2;
document.getElementById("p2").innerHTML=ans;
}
```

```
<body>
<form>
<input type="text" id="t1">
<input type="text" id="t2">
<input type="button" onclick=add() value="ADD">
<input type="button" onclick=sub() value="SUBTRACT">
<input type="reset" value="CLEAR">
</form>
```

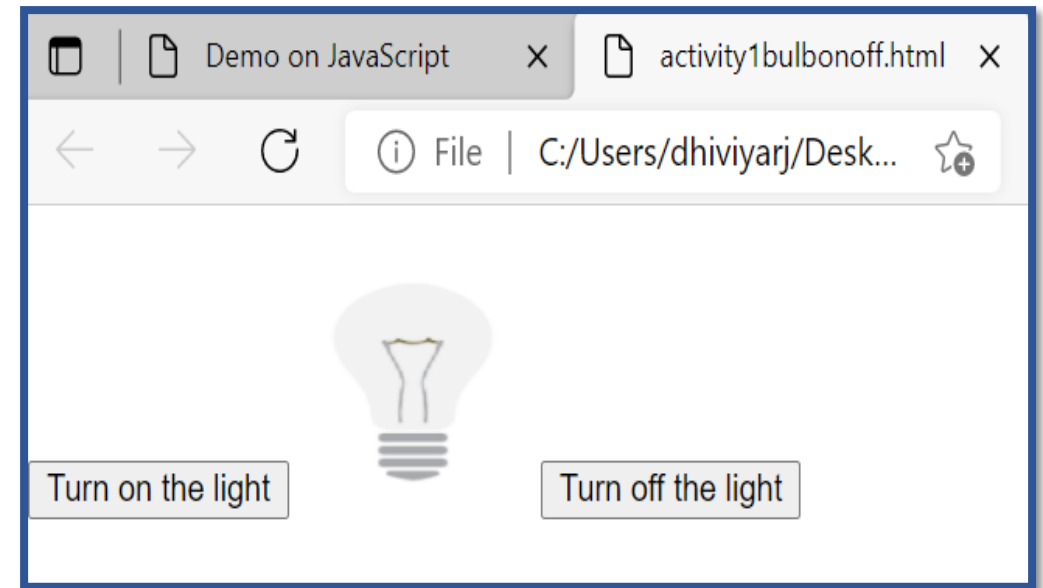

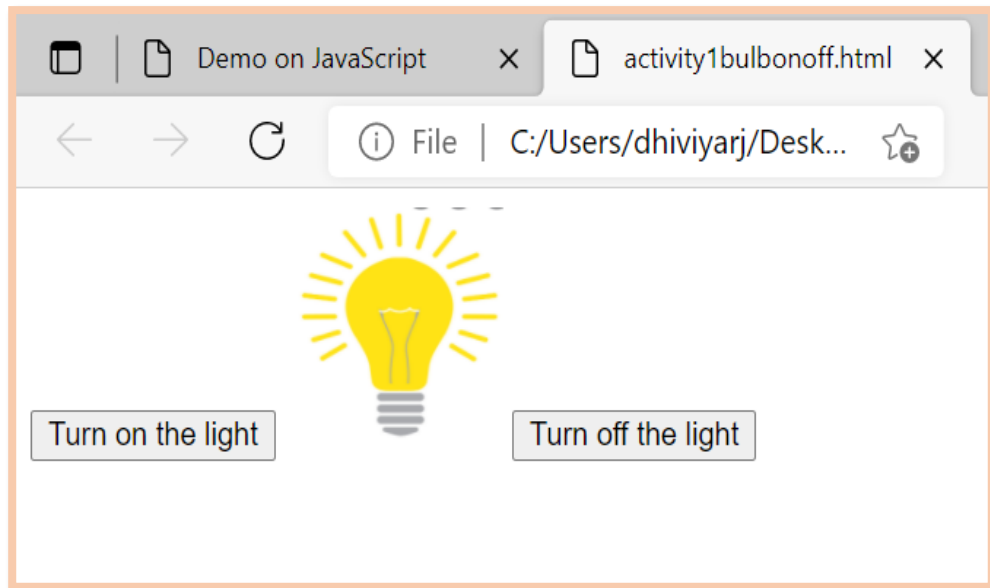

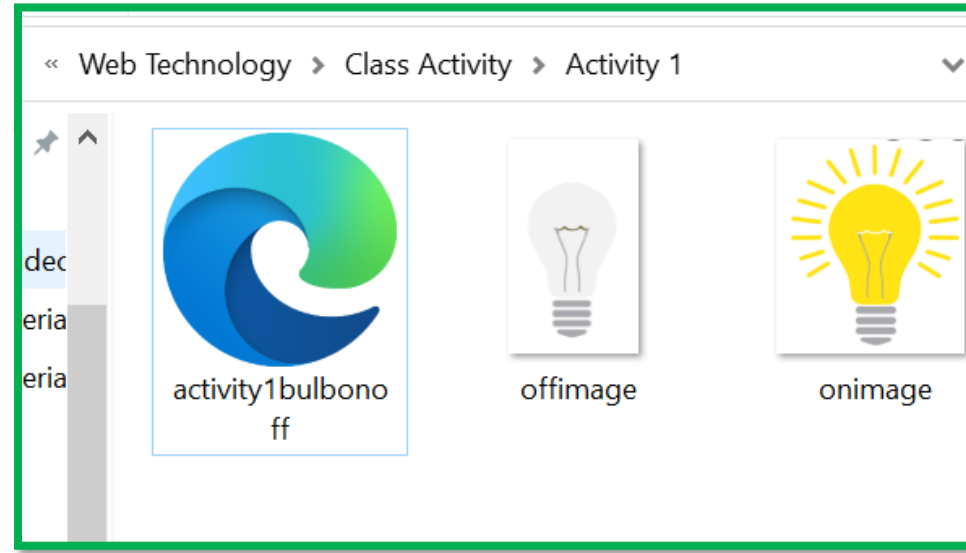

Activity #1 A simple calculator App Using JavaScript

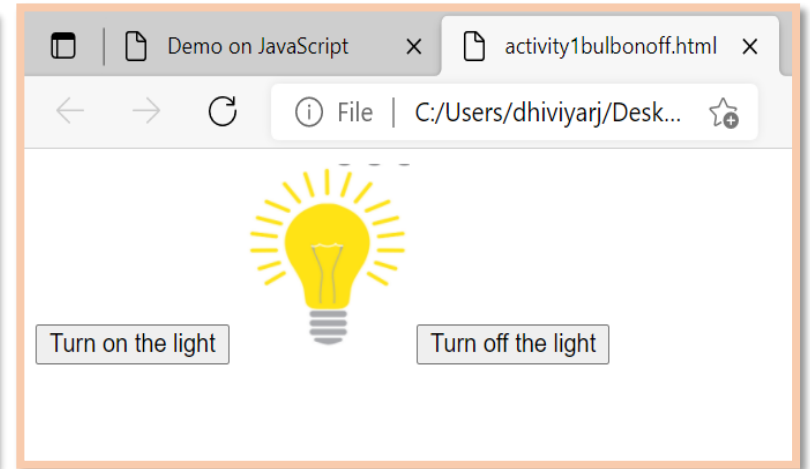

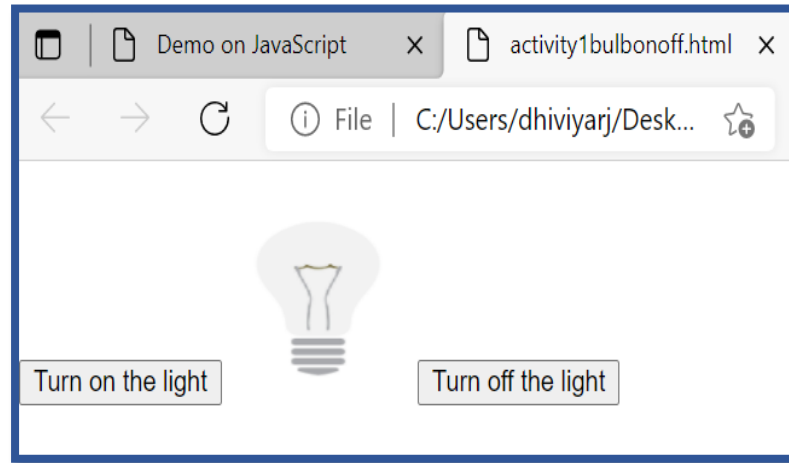

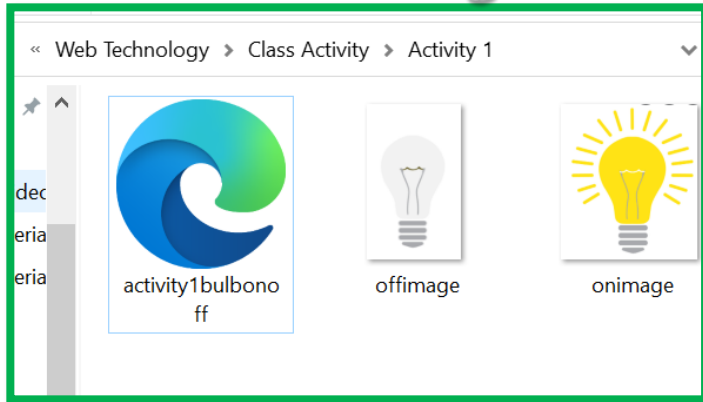

```
<script type="text/javascript">
function add()
{
v1=document.getElementById("t1").value;
v2=document.getElementById("t2").value;
n1=parseInt(v1);
n2=parseInt(v2);
ans=n1+n2;
//document.getElementById("p2").innerHTML=ans;
//document.write(ans);
alert(ans);
}
```

```
<body>
<form>
<input type="text" id="t1">
<input type="text" id="t2">
<input type="button" onclick=add() value="ADD">
<input type="button" onclick=sub() value="SUBTRACT">
<input type="reset" value="CLEAR">
</form>
```

Activity achieveit

Activity #2

File Edit Format View Help

```
<!DOCTYPE html>
<html>
<body>

<button onclick="document.getElementById('myImage').src='onimage.png'">Turn on the light</button>

<button onclick="document.getElementById('myImage').src='offimage.png'">Turn off the light</button>

</body>
</html>
```

*Thank
you*
