

Lab 6: To demonstrate the concept of Dictionary, do the following:

1. Create a dictionary having name and age, first ask from user how many pairs of name and age user wants to add, then get many number of pairs from user one by one using loop.
2. Now display the pair one by one through loop.
3. Add new pair of name and age through function.
4. Delete pair of name and age through function.
5. Update age corresponding to a name.
6. Display the count of key value pair available in dictionary.
7. Display the age corresponding to specific name.
8. Create a clone of dictionary and show the id of both.
9. Convert two lists into dictionary using zip function.
10. Convert a string into dictionary.
